Capstone Projects

Online Movie Management

Team: Individual

- Web application in which user can be able to see the movies and movie details, also clicking on the movie user can see the show details like in which theatre that movie being played, also there is a booking option which takes the user to the login page from where they can proceed to payment gateway.
- The Admin has full access to the whole system like, He/She can login to the admin dashboard and perform CRUD operations in Movie details, Show details, Theatre details.
- The website contains authentication for both user and admin.
- A complete dynamic website developed using React JS and bootstrap with backend technology , Spring Boot. MySQL is used for database.
